CAREER SUMMARY

- Experienced Systems Engineer passionate about building efficient, scalable, and secure solutions for Cloud. Over the years, I've honed my skills in implementing CI/CD pipelines, managing infrastructure with IaC tools like Terraform, and containerizing applications with Docker and Kubernetes. Skilled in enabling cross-functional teams through training and continuous improvement initiatives.

EXPERIENCE

DevOps Engineer

Deriv

Oct 2023 – Ongoing

Dubai, UAE

- Designed and maintained Jenkins CI/CD pipelines to automate build, test, and deployment processes, integrating Docker for containerized builds, Kubernetes for scalable deployment orchestration, and GitHub Actions for streamlined workflow automation
- Diagnosed and resolved complex build and deployment failures by analyzing logs, identifying root causes, and implementing long-term fixes. Collaborated with cross-functional teams to improve CI/CD workflows, ensuring consistent system reliability and minimal downtime.
- Established a robust monitoring setup for EKS with Prometheus, AWS CloudWatch, FluentBit, Grafana, and DataDog to minimize downtime and boost reliability, alongside creating Helm Charts for consistent, scalable microservices deployments.
- Developed and optimized Groovy scripts to enhance Jenkins pipeline capabilities, enabling seamless integration with Docker and Kubernetes for container orchestration, as well as incorporating monitoring tools like Prometheus and Grafana for real-time system insights and performance tracking.
- Migrated existing CI/CD workflows to Jenkins Shared Libraries, reducing duplication and streamlining maintenance.
- Managed and optimized Redis and PostgreSQL databases, ensuring high availability, performance, and reliability. Implemented best practices for backup, replication, and disaster recovery to safeguard critical data and maintain seamless application functionality.
- Collaborated with developers and QA teams to integrate automated testing and improve delivery cycles.
- Led incident response, troubleshooting, and post-incident root cause analysis, contributing to continuous improvement in system reliability.

System Administrator Specialist

FIS

Dec 2021 – Oct 2023

Chennai, India

- Strengthened the security of existing Linux environments by configuring firewalls, enforcing secure SSH practices, implementing regular patching schedules, and conducting vulnerability assessments to protect against potential threats and ensure compliance with security standards.
- Leveraged automation such as Terraform and Ansible to streamline routine tasks, reducing manual effort by 40% and improving operational efficiency. Automated infrastructure provisioning, configuration management, and monitoring to enhance system reliability and performance.
- Implemented comprehensive monitoring and alerting solutions for build systems using Prometheus and Grafana. Configured dashboards to track key performance metrics, set up automated alerts for critical thresholds
- Deployed and managed containerized applications with Docker and Kubernetes, integrating them into Jenkins pipelines.
- Maintained high availability of CI/CD infrastructure by managing change and release processes in alignment with ITSM principles, minimizing downtime during critical deployments.
- Documented detailed CI/CD processes, including pipeline configurations, deployment workflows, and troubleshooting techniques. Delivered comprehensive training sessions to cross-functional team.

Systems Engineer → Lead Systems Engineer

Fidelity Investments

Mar 2016 – Dec 2021

Chennai, India

- Built and managed Docker images, optimizing them for application performance and ensuring compliance with security standards. Conducted regular vulnerability scans and implemented best practices for container security.
- Managed Linux servers and ensured their security through routine patching, system hardening, and the use of custom shell scripts for automated administrative tasks such as log rotation, user management, and backup scheduling.
- provided on-call support to address critical system issues, leveraging advanced diagnostic tools and shell scripts to ensure swift incident resolution and maintain high availability.
- Proactively identified and remediated vulnerabilities by implementing regular patch management linux servers. Ensured timely security updates and critical patches to protect against emerging threats, thereby strengthening the infrastructure's resilience and maintaining optimal performance.
- Developed and maintained Grafana dashboards to monitor the health and performance, providing real-time insights for proactive issue resolution and resource optimization, ensuring high availability and efficient resource usage.
- Developed advanced shell scripts for automating infrastructure monitoring, application deployment, and data backup processes, significantly reducing manual effort and error rates.
- Led large-scale migration efforts for end-of-life (EOL) applications, upgrading to modern, secure platforms with minimal disruption. Strategically planned and executed migrations to enhance performance, security, and compatibility, reducing risks associated with outdated systems.

CLOUD

Amazon Web Services AWS

Microsoft Azure

CI/CD

Jenkins

Github Actions

Azure DevOps

PROGRAMMING

Groovy

Prometheus

Grafana

HP OpenView

SOFT SKILLS

- Strong analytical and problem-solving skills.
- Effective problem-solving and critical thinking.
- Ability to work effectively in a team environment.
- Strong organizational and time management skills.
- Detail-oriented with a focus on accuracy and quality.

EDUCATION

Degree - BTech IT

Anna University

June 2008 – June 2012

🔄 Junior Analyst → Senior Analyst

HCL Technologies

📅 Mar 2013 – Mar 2016

📍 Chennai, India

- Administered VMware vSphere infrastructure to ensure high availability and optimal uptime. Conducted patch management, implemented hardware fixes, and resolved issues to maintain seamless infrastructure operations.
- Handled the installation, configuration, and troubleshooting of Windows Server 2008 and 2012/R2. Managed Active Directory, DNS, DHCP, and Group Policy configurations to ensure system functionality and security.
- Installed and hardened Linux systems, implementing routine patch management, proactive monitoring, and issue resolution to ensure optimal performance and robust security.
- Adhered to the ITSM framework by managing incident, change, and problem processes while ensuring strict compliance with SLAs for creation and resolution.
- Handled on-call duties to provide 24/7 support for critical systems, ensuring rapid response to incidents and minimizing downtime to maintain high availability and performance.
