CAREER SUMMARY

- Experienced Systems Engineer with over 11 Years of solid background in Linux, Kubernetes and VMware with focus on designing, implementing, and optimizing software delivery using CI/CD pipelines. Proficient in deploying and managing cloud and on-premise infrastructure, with expertise in monitoring and troubleshooting complex environments to enhance system stability and performance.

EXPERIENCE

DevOps/WinOps Engineer

Deriv

Oct 2023 – Ongoing Dubai, UAE

- Sustained a secure, scalable, multi-cloud infrastructure (AWS/Azure) with OS independence, catering to latency-sensitive trading workflows. Implemented strong cloud security practices, including IAM policies, network security groups, data encryption, and regular audits to protect resources and ensure compliance with industry standards.
- Managed and optimized the Microsoft 365 infrastructure, overseeing the configuration, security, and administration of tools such as Exchange Online, SharePoint, Teams, Intune, and Azure AD. Developed and enforced policies to ensure secure and efficient access, compliance with organizational standards, and a streamlined user experience across the enterprise.
- Proactively managed the security of deployed Kubernetes instances by implementing best practices, including role-based access control (RBAC), network policies, and vulnerability scanning, ensuring compliance with industry security standards and protecting sensitive workloads.
- Led incident response, troubleshooting, and post-incident root cause analysis, contributing to continuous improvement in system reliability.
- Managed infrastructure as code with tools like Terraform and CloudFormation, and built CI/CD pipelines using GitHub Actions and Octopus Deploy to facilitate faster and more reliable deployments.

System Administrator Specialist

FIS

Dec 2021 – Oct 2023 Chennai, India

- Strengthened the security of Linux environments by configuring firewalls, enforcing secure SSH practices, implementing regular patching schedules, and conducting vulnerability assessments to protect against potential threats and ensure compliance with security standards.
- Designing comprehensive self-service and self-healing workflows initiated from an IT Service Management (ITSM) tool like ServiceNow, primarily leveraging scripting languages such as PowerShell/Bash.
- Enforced security best practices for scripting tools, including PowerShell and Bash, by implementing secure coding guidelines, managing permissions, using script signing, and restricting access to sensitive scripts, ensuring that automation processes adhere to security standards and prevent unauthorized access.
- Engaged in managing VMware and Nutanix infrastructure, actively seeking avenues to streamline daily operations through automation with secure handling of VMware PowerCLI commands to prevent unauthorized modifications to virtual infrastructure.
- Reduced the operations team's manual workload by automating routine tasks, achieving a significant decrease of up to 30%. This automation streamlined processes, minimized human error, and allowed the team to focus on higher-impact initiatives, ultimately improving overall operational efficiency.

Lead Systems Engineer

Fidelity Investments

📅 Mar 2016 – Dec 2021

📍 Chennai, India

- Oversaw a large-scale VMware infrastructure comprising over 10,000 servers across diverse hardware and software configurations. Implemented proactive monitoring and troubleshooting strategies to maintain high performance and reliability, ensuring seamless operation across a complex virtualized environment.
- Strengthened security for Windows servers by implementing Active Directory policies, configuring firewall rules, applying regular updates, and conducting security audits, ensuring secure and compliant Windows infrastructure for critical applications.
- Managed incident response, change implementation, update deployments, and end-to-end requests across the VMware platform and Windows OS. Focused on minimizing downtime and maintaining peak performance, while adhering to strict security protocols for smooth and secure operations.
- Proactively identified and remediated vulnerabilities by implementing regular patch management across VMware and Windows servers. Ensured timely security updates and critical patches to protect against emerging threats, thereby strengthening the infrastructure's resilience and maintaining optimal performance.
- Developed and maintained Grafana dashboards to monitor the health and performance of multiple vCenters, providing real-time insights for proactive issue resolution and resource optimization, ensuring high availability and efficient resource usage in VMware environments.
- Led large-scale migration efforts for end-of-life (EOL) applications, upgrading to modern, secure platforms with minimal disruption. Strategically planned and executed migrations to enhance performance, security, and compatibility, reducing risks associated with outdated systems.

Senior Analyst

HCL Technologies

📅 Mar 2013 – Mar 2016

📍 Chennai, India

- Troubleshoot L1/L2 Incidents Across VMware, Windows, and Exchange Environments by Providing Level 1 and Level 2 support for incidents on VMware, Windows servers, and Exchange environments, ensuring rapid diagnosis and resolution to maintain high availability and minimize downtime. Emphasized security best practices in all troubleshooting processes to safeguard system integrity.
- Implemented and Secured Configuration Changes on Windows and Exchange Servers by Managed configuration changes on Windows and Exchange servers, adhering to change management protocols to ensure security and compliance. Applied rigorous access controls and encryption to protect sensitive data and maintain regulatory compliance.
- Managed and Secured VMware vSphere Environment: Oversaw the VMware vSphere environment, focusing on performance optimization, resource management, and security. Ensured strict adherence to SLA requirements and implemented robust access controls, network segmentation, and regular patching to enhance security and operational stability.
- Enhanced Security Posture Across VMware, Windows, and Exchange Platforms by Conducted regular security audits and vulnerability assessments within VMware, Windows, and Exchange environments to proactively identify and address potential threats. Applied role-based access control (RBAC), encryption, and secure communication protocols to protect systems and data.

EDUCATION

Degree - BTech IT

Anna University

📅 June 2012 – June 2016
